Explosion in Pit Removed by Company.

NEW PIT OPENING WELL

Giroux Company Maintains Its Tonnage by Drawing on Lower Levels.

In the seekly review of camp operations at the Eiv Expositor states that the work on the property of the Nevada Consolidated at the big Copper Flat pit and a many times and the extraction of approximatives and the extraction of approximatives and the extraction of approximatives many times, that tomage is the removal of overburden. Immediately following the premature explosion of powder many times, that tomage is the removal of overburden. Immediately following the premature explosion of powders may leave 80 of 50 mJy 7, which brought death to ten men, churn in this level and the one below were fung in pending an investigation of the cause the account of the week on both these levels and the one below were fung in pending an investigation of the cause and the coroner's jury. Beat the accident by the deputy state into appeted a not the coroner's jury. Beat the accident by the deputy state into appeted and the coroner's jury. Beat the accident by the deputy state into appeted and the coroner's jury. Beat the accident by the deputy state into appeted and the coroner's jury. Beat the accident by the deputy state into appeted and the coroner's jury. Beat the accident by the deputy state into appeted and the coroner's jury. Beat the accident by the deputy state into appeted and any foreign the pentils and the coroner's jury. Beat the accident by the other laborest. The new Liberty pit continues to prove in the state of the week on both these levels and the coroner's jury. Beat the coroner's jury and the coroner's jury an tions the Ely Expositor states that the solidated at the big Copper Flat pit and the Liberty pit has again resumed norreal steam-shovel and churn-drill activities and the extraction of approximately 2000 tens of ore per day in addition moval of overburden. Immediately following the premature explosion of powder which brought death to ten men, churn drills and steam shovels in operation on up, pending an investigation of the cause of the accident by the deputy state mine inspector and the coroner's jury. Resimption of work was begun again the fore part of the week on both these levels and the surface scene of the terrible accident has by this time been removed and nearly forgotten by the other inborers. The new Liberty pit continues to prove up a large body of a much higher grade sulphide ore than that extracted from its neighbor. Several carleads of one from this pit are daily going to the smelter while the work of removing the overburden is being carried on.

Veteran Mine.

Veteran Mine.

At the Veteran mine the 1002-top-aday production is being maintained from the underground workings. Extraction and development of ore from the contact deposit on the 409 level, which is one of the most recent and, to some, surprising discoveries in the district, is being carried on with the most gratifying respits both as to quantity and quality of the ore, which maintains a higher copper tenor than ore from the other pertions of the mine. When this new ore body was first struck in wings No. 1; on this level, the report of the strike was taken with a great deal of uncertainty, and when it was officially confirmed was looked upon by many of the mine operators in the district with skepticism. The opinion was heretofore almost universal that the district would never reveal any commercial ore body on the porphyry-lime contact. This theory has been entirely upset by developments at the Veteran, where a greater part of the tentings of the mine's production, and by far its higher grade of ore, is now being taken from a contact deposit.

Giroux Mines.

Giroux Mines.

Giroux Mines.

Within the past week, while there has been no diminution in the shipment of an average of 1800 tons of ore to the Modill smelter each day, there has been considerable change in the manner of its production. Heretofore, or since the commencement of shipments, the greater part of the ore has been taken from the old dumps on the surface at the Bunker-hill and Morris mines. These have now become nearly exhausted and in order to maintain the average production it has been necessary to increase the working force and double the energy of the underground work on both of these mines. While these changes have made it necessary to employ more men in the underground developments, the extraction of the required tomage of sulphide ore is now being produced from these mines with ease and the further development of the ore bodies carried on at the same time. Approximately 360 men are now employed underground here, and this working force will be gradually increased until in the neighborhood of 760 men will be at work on the Giroux before the close of the veer. he at work on the Giroux hefore the close of the year.

BIG TONOPAHS EARN

mont Both Experience Success in Month of June.

Despite the fact that the Tonopah Minmpany during the month of June treated about 400 tons less than in May sults above those of May, the company carning net during June the sum of \$151,389. The mill treated 14,551 tons of ore, dry weight, in June, the average per ion gross value of this ore being \$18,93, while 31 tons of concentrates were produced. The total gross value of the buillon was \$210,500 and of the concentrates \$28,189.

PUBLIC REFUSES TO ENTER MARKETS NOW

James A. Pollock & Co., bankers and brokers, furnish the following, received over their private wire yesterday after-

brokers, furnish the following, received over their private wire yesterday aftermoon.

Paine, Webber & Co. Boston—The market does not respond to good news as well as the bulls would like to have it, and this argument is being used by the floor traders to sell stocks on. It was remarked at one time today that the banks were going to make an organized raid on the market and this brought out a little weak selling, but on the whole fluctuations were not worthy of mention. The local market had absolutely no feature. Coppers were entirely neglected in spite of the strength of the metal. Shannon was the only stock to show any activity on the advance and we look for a dragging, dull market for some weeks to come with the good stocks a purchase on all reactions.

Hornblower Letter, Boston—Local market was very dull all day and but few transactions are recorded. Sentiment is still builtsh and higher prices are looked for for good copper provided the New York market holds strong. There are good supporting orders just under the market.

Logan & Bryan, New York—Except for the moderate activity which prevailed during the first hour trading during today's session was dull and featureless, with quite a little scattered realizing in evidence, due to the strength of the agricultural commodity markets and the character of crop advices emanating from the northwest and southwest. Marked attention was not paid to the Stanley report, though it is generally conceded that foreigners are likely to take the matter more seriously than we, and while, of course, liquidation on a broad scale may not ensue, still it is admitted that the document will not serve the purpose of increasing the initiative of prospective buyers of American securities.

A canvase of banking institutions has revealed the feet that offerings of over

prospective buyers of American securities.

A canvass of banking institutions has revealed the fact that offerings of over the year runds are very light, even at advanced rates, which appears to confirm the view that bankers are disposed to look for a higher range of money rates later. Advices from the other side are indicative of more or less concern relative to the status of international politics, and, from a domestic standpoint, many are disposed to assume a waiting affitude pending the various important political occurrences which are scheduled to take place early in August. While it can hardly be said that the crop news today was relative of a material change in the agricultural prospect, still the same served to accentuate the fact that the crops are not as yet all made and that happenings of a nature to upset calculations are not improbable. We continue to adhere to the view that existing conditions do not favor a sustained rise in securities prices.

Work Being Done.

During this past six months we have drifted over 2000 feet and have put up raises aggregating 350 feet. About 600 feet of this work has been done on the 1000-foot level, crosscutting west into heretofore unexplored territory. The ground traversed does not show much mineralization; however, we are now prospecting a fissure which we encountered in this crosscut about 125 feet rom the west line of our territory. This fissure looks more promising than any of the small breaks intercepted by this crosscut, and we are prosecuting work along this break in a northeasterly direction. On the course of this fissure we have about 700 feet to our north line.

About 1000 feet of work has been done by the company on the 1500-foot level prospecting virsin territory. This work About 1000 feet of work has been done by the company on the 1500-foot level prospecting virgin territory. This work on the 1500-foot level has shown conclusively that the highly mineralized territory to the north and west of the shaft is very promising ground, and the management is quite hopeful that ore bodies of great commercial importance will be developed in this locality. Heretofore the company has prosecuted extensively the two main fasures, that which lies approximately 100 feet west of the shaft, known as the west fasure, and also the Hungarian or cast fasure, which lies approximately find for the shaft, and but very little prospecting has been done outside of these lines. As stated above, the condition found to the north and west is of such morit that we believe larger ore bodies will be found in this section than have been mined heretofore in either of the fissures mentioned.

CLIFF COMPANY HAS ITS ANNUAL SESSION

ON LOCAL EXCHANGE ZINC ORE ELUSIVE AS ANY OTHER KIND

High Hopes Frequently Are Dashed When Investigation Is Started.

The demand for zinc ore and the consequent enhanced value of this mine product has changed the plans of many Utah propositions, especially in the Tinic district, and Tintic gives promise of being an important contributor of this being an important contributor of this class of mineral wealth during the balance of 1912. For years the stockholder has been hearing from numerous propositions rated as allver-lead producers the complaint that the zinc content of the ore prevented successful marketing of much tonnage which, minus the sinc, would be dividend material.

ore prevented successful marketing of much tonnage which, minus the sinc. would be dividend material.

A well known operator of Tintic stated to The Tribune Tuesday morning that when the tide began turning towards sinc he began reviewing the experiences of the past in the effort to develop a sufficient tonnage of this hertofore despised into ore to afford a comfortable revenue to his company.

"I never appreciated before how elusive sinc ore really is," he said. "In the past we dodged innumerable places in our property because of the zinc, and we did this so often, never pansing anywhere to do more than was absolutely necessary in a development way, that the importance of this zinc ore became enlarged and emphasized so that after a while we all began to allude to the property as half a zinc mine at least. "During the past few weeks we have been going back and investigating these points, and we find that there is hardly enough of the commercial stuff available to wad a respectable shotgun. Not that ore isn't there, but it is a low grade material from the zinc standpoint, and it could not be shipped as zinc ore for this reason. If shipped as zinc ore for this reason. If shipped as zinc ore for this reason. There is nothing more tricky than zinc ore anyway, and it is just as well to wait until a few average lots of this grade of ore have been marketed before forming too roseate a view of the future."
